## Mammut Filling Mixer AFM 175 5S

# MAMMUT Filling Mixer AFM 175 5S

## MAMMUT Filling Mixer AFM 175 5S

Mammut filling mixers are field proven and modified concrete mixers from the manufacturer MAMMUT in Austria. Robust technology, combined with the filling expertise from SAQUICK, guarantees high output for flood protection and dike protection or dam construction. For damp, wet or very coarse sand. Safe and fast.

The SAQUICK filler neck allows both hands to hold the sandbag open to ensure the correct dosage of sand. Filling takes only 2 seconds with this quick opening and closing system.

The 5 filling openings are arranged so that the machine can be filled safely with a wheel loader or excavator. 7 filling spouts are possible, but the working space is restricted and users need to vacate the area when filling the machine.

Different types of drives are possible with most MAMMUT filling mixers: Electric drive, petrol engine or PTO (Power take off).

Sandbags sized 30 x 60 cm and silo sandbags with an opening of 24 cm (appropriate filler neck available).

### Technical Data:

- Operative within 10 minutes
- 5 SAQUICK dosing filling spouts for fast and continuous filling.
- Standard bags sized 30 x 60 cm (smaller filling spouts for silo bags)
- 5 filling openings with quick open/close system, bag holder
- easy filling in 2 seconds, approx. 600 bags per hour possible per opening (corresponds to approx. 3000 bags / hour / machine = 45 tons of sand)
- 7 filling openings possible
- Processing moist and wet sand
- Protective grille in the container
- 15 kW electric motor, 400 volt
- Robust angular gear for smooth operation
- 1000 liter material container
- Container diameter 175 cm
- Stacker shoes
- Galvanized height adjustment
- Removable bag rack
- Hopper accessories
- Machine painted
- Other accessories according to the price list
- 3 year guarantee
